

Pallet Racking

Pallet racking is the most common and efficient way to organize warehouse storage, designed to hold palletized materials in horizontal rows across multiple levels. At Trimet Storage Solutions, we offer both Structural and Roll Formed pallet racking systems to suit your needs—whether it's for heavy-duty impact resistance in coolers and freezers, or cost-effective options with faster installation.

Our team works closely with you to answer key

questions: Are we maximizing our warehouse space? Is the layout safe and efficient? From product specs (like size, weight, quantity, temperature needs, and inventory turnover) to forklift compatibility, traffic flow, and WMS integration—we take it all into account. Whether you're shipping by the skid or picking individual orders, planning for the next five years or today, Trimet helps design smarter, safer, future-ready storage.

Selective Pallet Rack;

Good for:

Skid Pallet Storage

Material Handling:

Counter Balanced forklift
(Min 10'-6" aisle)

Push-Back racking;

Good for:

Skid Pallet Storage

Same products / LIFO

Material Handling:

Counter Balanced forklift

Drive-in Racking;

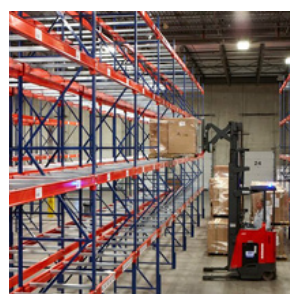

Good for:

Skid Pallet Storage

Same products / LIFO

Material Handling:

Counter Balanced forklift

Double-Deep racking;

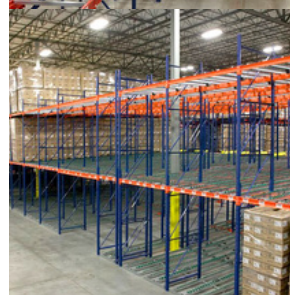

Good for:

Skid Pallet Storage

2-deep same products

Material Handling:

Reach-Truck (Can work on 9' aisle)

Pallet-Flow racking;

Good for:

Skid Pallet Storage

Same products / FIFO

Material Handling:

Counter Balanced forklift

Very Narrow Aisle racking;

Good for:

Skid Pallet Storage

Material Handling:

VNA-Truck
(Can work on 5'- 8" aisle)
